

An invaluable resource for helping Law Enforcement solve criminal cases, and bring closure to affected families, our ML/AI solution is a powerful tool in the workflow of police organizations throughout North America.

Unleashing the Power of Cybercheck Starts with Great Questions

Extracting Cyber-DNA for Criminal Investigations

Technology plays a pivotal role in solving 90% of cases investigated by law enforcement agencies in today's digital age. A world where detectives are not just armed with physical forensic investigation tools, but with a sophisticated system that uses machine learning and artificial intelligence to place cyber-DNA at a crime scene.

At Cybercheck, we firmly believe that every crime scene over the past 15-20 years has a unique cyber-DNA profile that can play a vital role in solving the case. We've built a system that allows law enforcement agencies to leverage this cyber-DNA to generate new leads or provide probable cause to move an investigation forward.

Our system uses machine learning and AI to analyze vast amounts of digital data, revealing patterns and links that might be missed due to resource limitations by human investigators, not enough man hours to comb the vast digital ocean. By harnessing the power of open-source intelligence, we're able to place cyber-DNA at a crime scene, giving law enforcement agencies a powerful tool to solve cases where other leads have run cold.

Perfecting the Art of Asking Questions

But like any AI or machine learning system, the quality of the results you get depends a lot on the quality of the questions you ask. In an investigation, the answers are only as good as the questions. This is why it's crucial to ask great questions when using our system. The right questions can help you; fact check what you know, confirm or refute your assumptions, double check alibies, and fill the gaps in your knowledge of the event.

Well-structured questions can provide you with the missing pieces of the puzzle, leading you to a complete narrative around the event you're investigating. They can help you build a strong case, backed by hard evidence, that can stand up to scrutiny in a court of law.

So, how do you craft the perfect questions? It's not about asking more questions, but about asking the right ones. It's about understanding your case, identifying the key areas of uncertainty, and then formulating questions that can help you uncover the facts.

Unlocking the Power of Cybercheck

When you use Cybercheck, you're not just using a tool, you're tapping into a wealth of knowledge, experience, and expertise. Our system is built on years of research and development, and it's designed to be intuitive and user-friendly. To fully unlock its potential, you need to ask well-structured questions.

Start by fact-checking what you know. Ask questions that can confirm or refute the information you already have. Then, probe deeper. Ask questions that can reveal new information, that can shed light on the hidden dimensions of your case or test working theories around your investigation. Finally, fill in the gaps. Ask questions that can help you understand what you don't know.

Remember, the power of Cybercheck lies in its ability to analyze vast amounts of digital data and extract meaningful insights. But to do that, it needs your input. It needs your questions. So, ask away. Ask smart, ask deep, ask wide. And watch as Cybercheck helps you unravel the mystery, one piece of cyber-DNA at a time.

Things to Think About When Crafting the Case Questions

When crafting your questions think about the timeline of events and the connections between the players involved. We also see many of the same questions across cases of a similar nature. Do we see the cyber profile of the suspect in proximity to the victim before the event? Does the suspect have a digital link with the victim? Can Cybercheck note any relationship between the parties involved? Where is the murder weapon?

If you want some guidance on asking great questions, reach out, we'd enjoy the conversation. Email us at Support@cybercheck.com.

The Future of Crime Solving is Here with Cybercheck

Together, we can make a difference. Together, we can make our communities safer. Welcome to the future of crime fighting. Welcome to Cybercheck.
